Business Briefing on IIJ's New Remote Access Service

Change in Enterprise Office Internet Usages
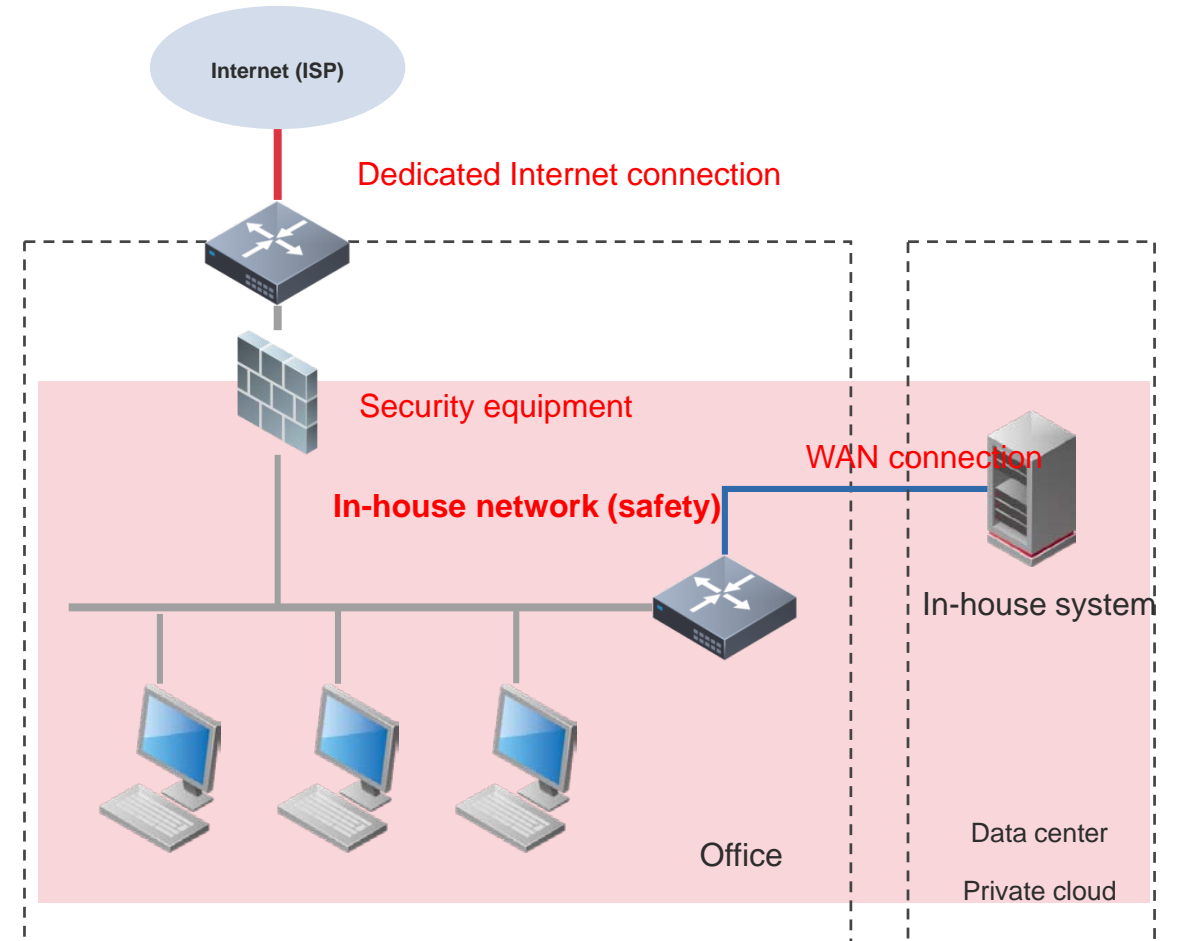

IIJ
Internet Initiative Japan

January 25, 2022
Internet Initiative Japan Inc.
Network Division Network Department Internet Access Section, Manager
Takashi Hara

Typical way to use the Internet by companies before 2019

- Employees come to the office to work

- Concept of "in-house network"

- Security through a perimeter defense

Internet (ISP)

Dedicated Internet connection

Security equipment

WAN connection

In-house network (safety)

In-house system

Office

Data center

Private cloud

Recent changes in use of the Internet by companies

Advancement of DX/spread of digital workplace

- Rapid increase in use of public Clouds, e.g. Microsoft 365, Google Workspace

→ Rapid increase in public Cloud-bound traffic instead of WAN (in-house network)

# Diversified work styles/ Normalization of teleworking

- Rapid increase in operations using the network outside the companies' control, e.g. private Internet connections

→ Necessity of auditing/control of connections including use of public Clouds

Although these changes were partially provoked by the Covid-19 pandemic, it is not the only cause.

The changes are not temporarily but are here to stay. These changes in the corporate activities will spread among more companies.

# No end to the increase in the traffic bound to the Cloud operators

〜 Example of traffic between cloud operator X and IIJ 〜

■ Changes from 2019
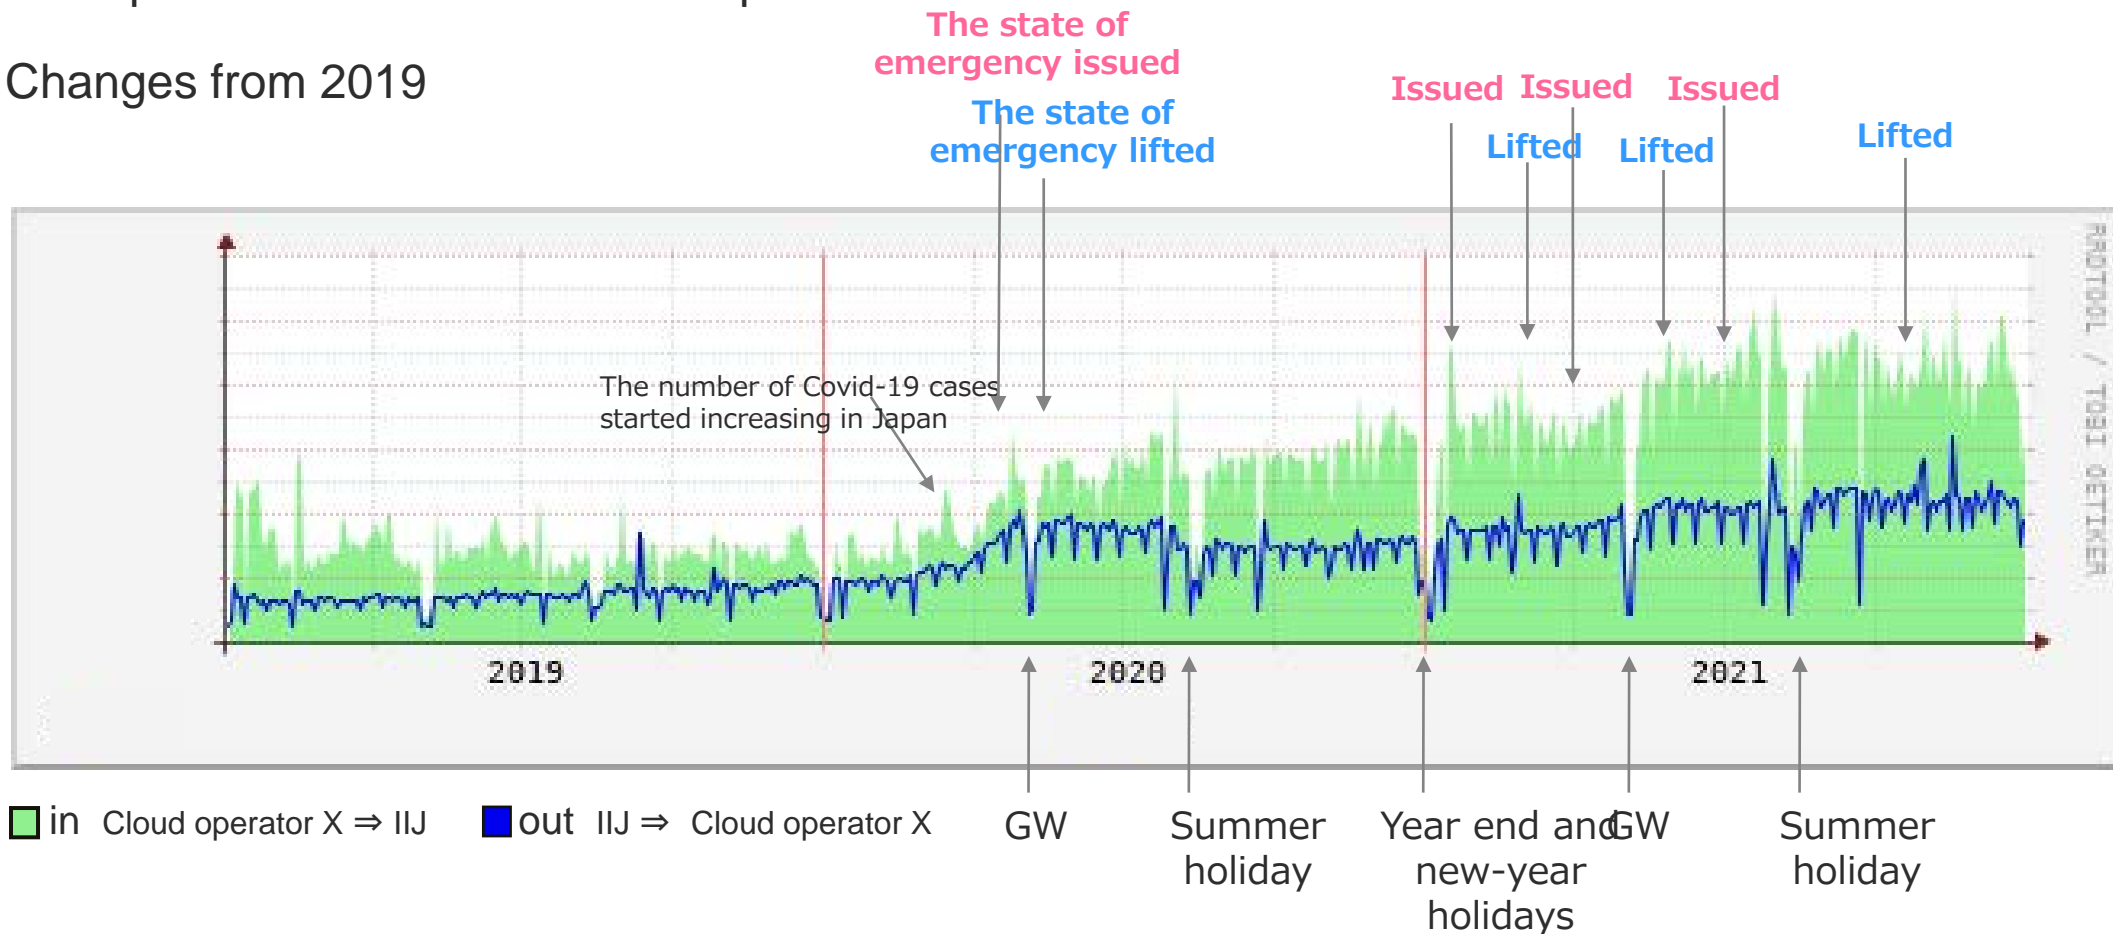

- **Connection with a cloud operator shows an increase of more than twice between 2019 and 2021**

- **There is no doubt that, if more than one cloud service is used, the total amount has increased even more.**

■ Traffic on one weekday

Common business start time

Common lunch break time

Common business end time
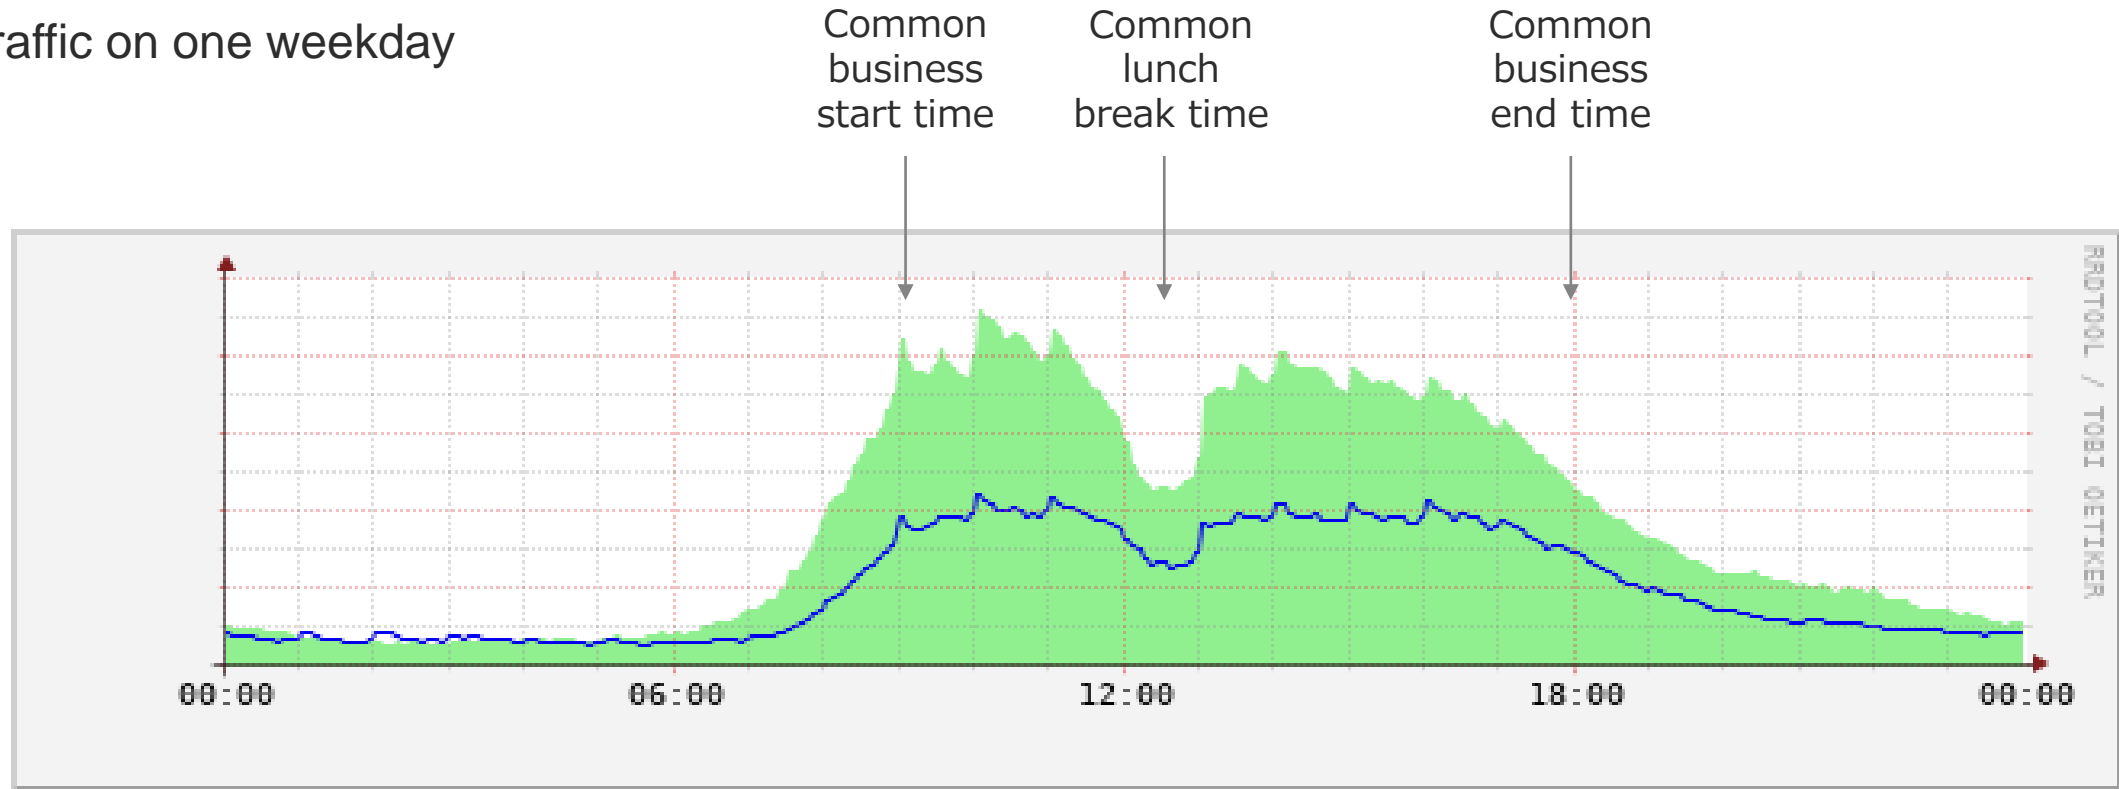

in Cloud operator X ⇒ IIJ   out IIJ ⇒ Cloud operator X

- **Traffic fluctuates according to increase or decrease in the use by corporate customers during the daytime on a weekday**

- **It is clear that use specifically for business increases**

Increase in customers' equipment investment in association with the traffic increase
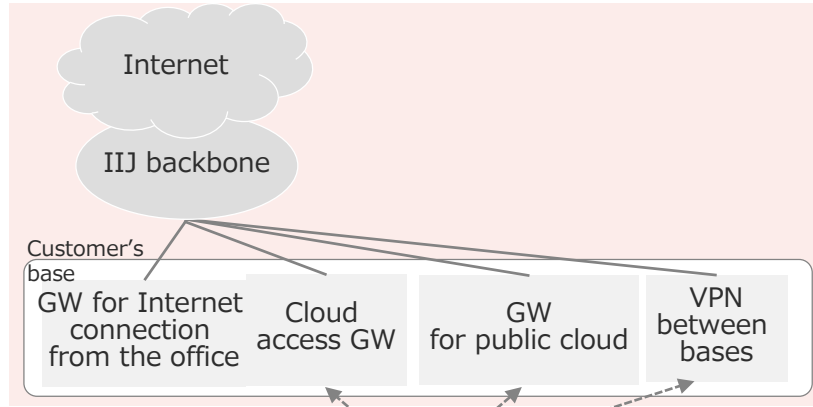

- Enhancement of Internet connection equipment

Internet

IIJ backbone

Customer's base — Router FW

Ⅲ- 3. Service & Business Developments: IP Service *% = Year over year comparison*

IP Service (recurring) revenue

Revenue (unit: ¥ billion)

	FY17	FY18	FY19	FY20	FY21
Total	10.14 (+3.8%)	10.57 (+4.2%)	10.70 (+1.2%)	12.17 (+13.7%)	6.62 (+13.2%)
4Q	2.55	2.65	2.71	3.18	
3Q	2.56	2.71	2.68	3.14	3.35
2Q	2.51	2.63	2.68	2.97	3.28
1Q	2.49	2.58	2.63	2.88	

- IP (Internet Protocol) service is 100% recognized in Internet connectivity services for enterprise
- ISP is an abbreviation for Internet Service Provider

- IP Service is bandwidth guaranteed and dedicated Internet connectivity service
  - Charge based on contracted bandwidth
  - Enterprises use the service for their core and main Internet connectivity
- Demands have been increasing along with the advancement of IT usages in Japan as seen in increases in virtual meetings, work from home, SaaS usages etc.
  - New trend of hybrid work style, expansion of SaaS usages, full-scale adoption of Cloud services, increase in CDN traffic and more
- IIJ's competitive advantages
  - Japan's first full-scale ISP who has great relationship with Japanese blue-chips companies
    - Clients are mainly blue-chips companies including BtoBtoC companies, such as consumer ISP, and central government agencies
    - New entry to the market is difficult as it has already been matured

IIJ's Internet backbone ~ global coverage ~

From IIJ's consolidated financial results for 1H21
https://www.iij.ad.jp/en/ir/library/financial/pdf/IIJ2Q21E_presentation.pdf

Increase bandwidth

Expand lines for different uses

Internet

IIJ backbone

Customer's base — Router FW

From 100Mbps to 1Gbps
From 1Gbps to 10Gbps
From a line of 10Gbps to multiple lines of 10Gbps

Internet

IIJ backbone

Customer's base — GW for Internet connection from the office | Cloud access GW | GW for public cloud | VPN between bases

Lines, routers and FW are prepared for each use

- Investment in the equipment of Internet connection lines increased due to the increase in use of public Clouds
  - Customers enhanced their equipment using diversified methods
- The trend has continued since 2020 through 2021 and is likely to continue toward the future.

Case of Internet use by an advanced major company

Add Internet connection for public cloud/remote access

Use of a cloud outside the control is prohibited

Internet connection for remote access

Internet connection for public cloud
(including use of closed connection with cloud)

Dedicated Internet connection(Other uses)

Public cloud

Internet (ISP)

Internet (Individual subscription ISP)

Internet (Individual subscription ISP)

VPN equipment

Security equipment

Auditing/control equipment

Build an auditing/control system to control cloud-bound traffic

WAN connection

In-house system

Office

Remote work (households)

Data center

Private cloud

Remote work and use of public Clouds are accepted as normal, but the uses outside the control are not accepted. (Accelerated shift to zero trust)

- Build a system for auditing/control

- Install an aggregation point of communications within the company's own network

A large-scale and highly advanced network like this can only be implemented by a major company

A medium-sized or semi-major company would not be able to afford installing it on their own

IIJ Omnibus

With the network cloud provided by IIJ Omnibus, a highly advanced network can be implemented through outsourcing.

8

IIJ Omnibus is a brand of the network cloud that covers an entire corporate network

■ IIJ Flex Mobility Service/ZTNA

One of the services constituting IIJ Omnibus and a remote access service with added function of zero trust network

IIJ Flex Mobility Service/ZTNA

9
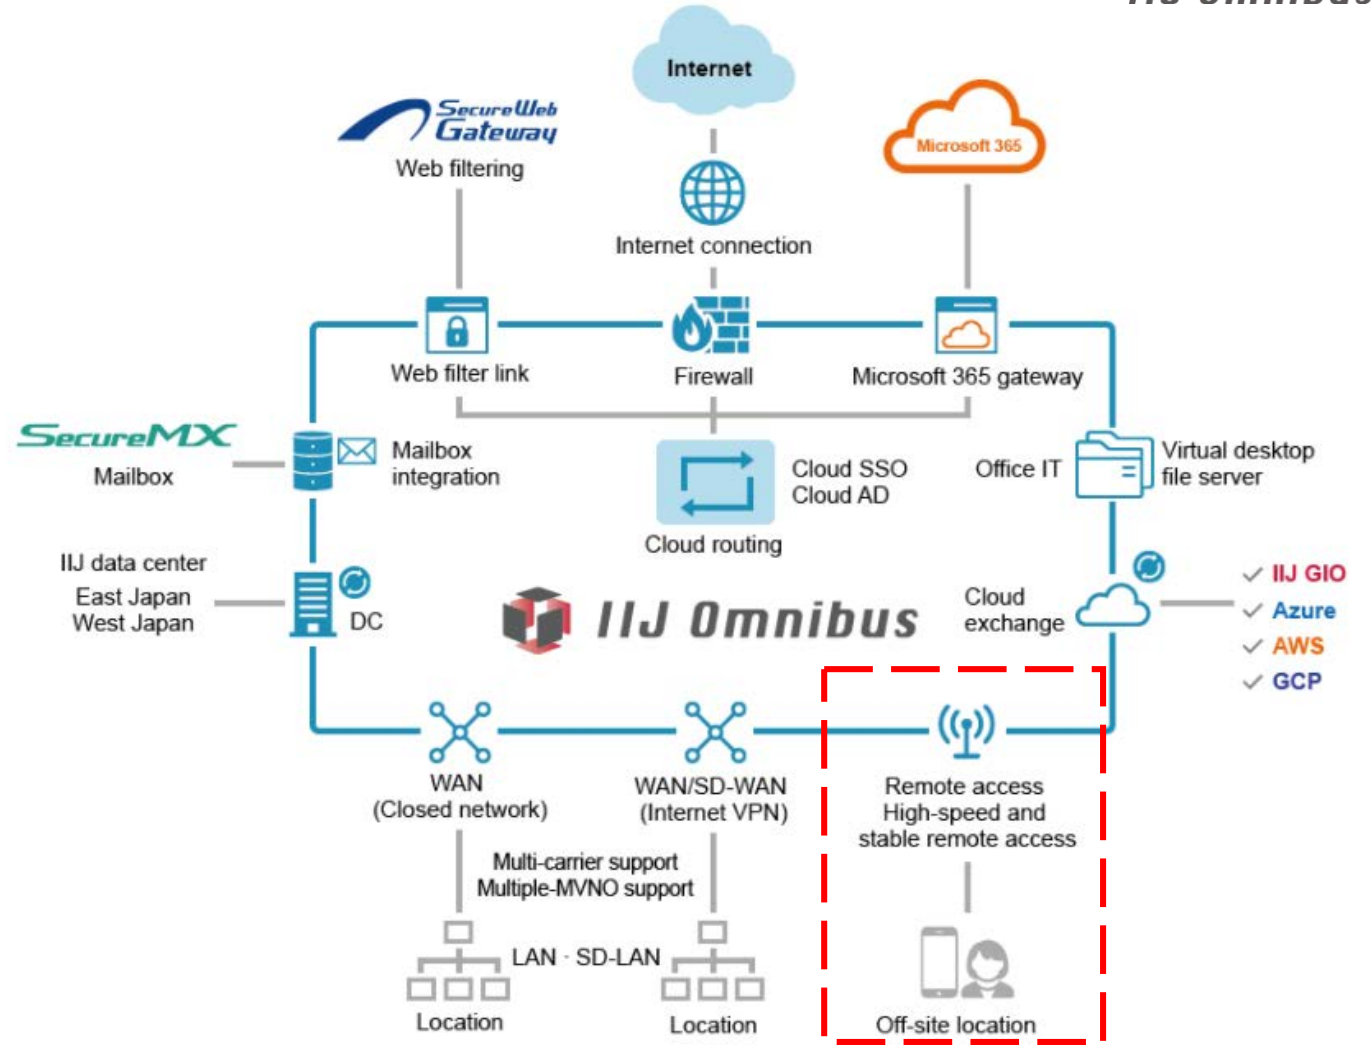

New IIJ Flex Mobility Service that realizes Zero Trust

Same Trend seen for Remote work implementation and IIJ Flex Mobility bandwidth

Changes in IIJ Flex Mobility Service/ZTNA bandwidth from 2020 to 2021 (by December 2021)

Market for Domestic Remote Work
Number of companies implementing Remote work (2019 – 2025)

2020/1　2020/3　2020/7　2020/11　2021/3　2021/7　2021/11

Outlook for the number of companies implementing remote work from 2019 to 2025
Source: Report from IDC

The VPN traffic has been on a gradual downward trend since the state of emergency was terminated. However, it did not go back to the level before the pandemic.

It is likely that the work style will continue transforming and the way of working remotely will remain
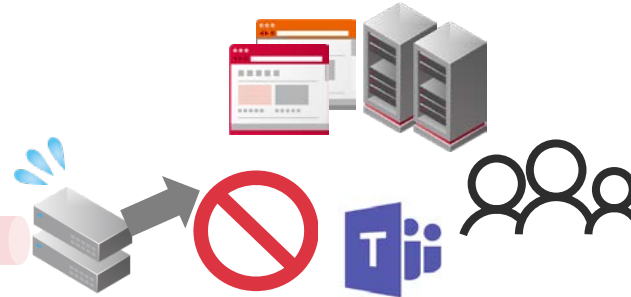

Issues solved by IIJ Flex Mobility Services?

What are the issues of network when working remotely?

· VPN disconnects..
· The virtual desktop does not work via VPN
· Cannot hold a video conference by using VPN…
· The in-house system slows down via VPN…

Slow network connections

Constant disconnections

Poor VPN connectivity

After all I cannot have any job done working remotely…
In the end, I have to go to the office..

Main reasons for Slow and Poor Connectivity

Wi-Fi setting at home

Internet connectivity quality at home

VPN servers for remote access and WAN line

23

Frequently occurring situation when working remotely

Connect to the in-house file server via VPN and edit a PPT document

➡

Save the file and close the PC (sleep/lock)

➡

Open the PC and start editing the document again

Start forgetting about VPN

New Issues emerged with Remote Work

Is security in teleworking OK?

Who connects from where?

Is the connecting PC safe?

Virus

Isn't it a public Wi-Fi?

Is there a risk of information leakage?

Access status is invisible…

Insecure about the shift to teleworking

What we hear

Worry about security when working from home

Sending employee's desktop to his/her home

Sending PC to home

Network bandwidths are in shortage because of teleworking?
We receive more complaints of slow connections…

No idea why…

Suddenly short of bandwidth?

Which part should be spud up?

Internet

VPN

Usage status is invisible…

No idea what to do…

Inquiries about unstable connections

They blame us for unstable connection, but what about their Wi-Fi connections at home?

There is no way to know about their home Internet connection…

Without knowledge about the users' environments…

troubleshooting is difficult …

What issues of teleworking will come up to the surface in the future?

SP	800-207	**Zero Trust Architecture** Download: SP 800-207 (DOI); Local Download; ZTA project at NCCoE	Final	8/11/2020

Background for emerging concept of Zero Trust

Flexible working style
**Enterprise IT resource everywhere**

Office, home, etc.

Cloud, On-premise etc.

Essence of Zero Trust

How to Protect?

**Enterprise IT resource everywhere**

Data, resource etc.

Essence of Zero Trust

Flexible working style

Basically,
Do Not Trust the
Origin of Access
Point

Office, home, etc.

Essence of Zero Trust
Flexible working style

Check the policy every time

Office, home, etc.

Essence of Zero Trust

Flexible working style

Approve if match

Office, home, etc.

What you need:

PDP (Policy Decision Point) **:**
Policy decision

PDP

Decide a policy

PEP

Enforce the policy

PEP (Policy Enforcement Point) **:**
Policy enforcement

salesforce

Office 365

aws
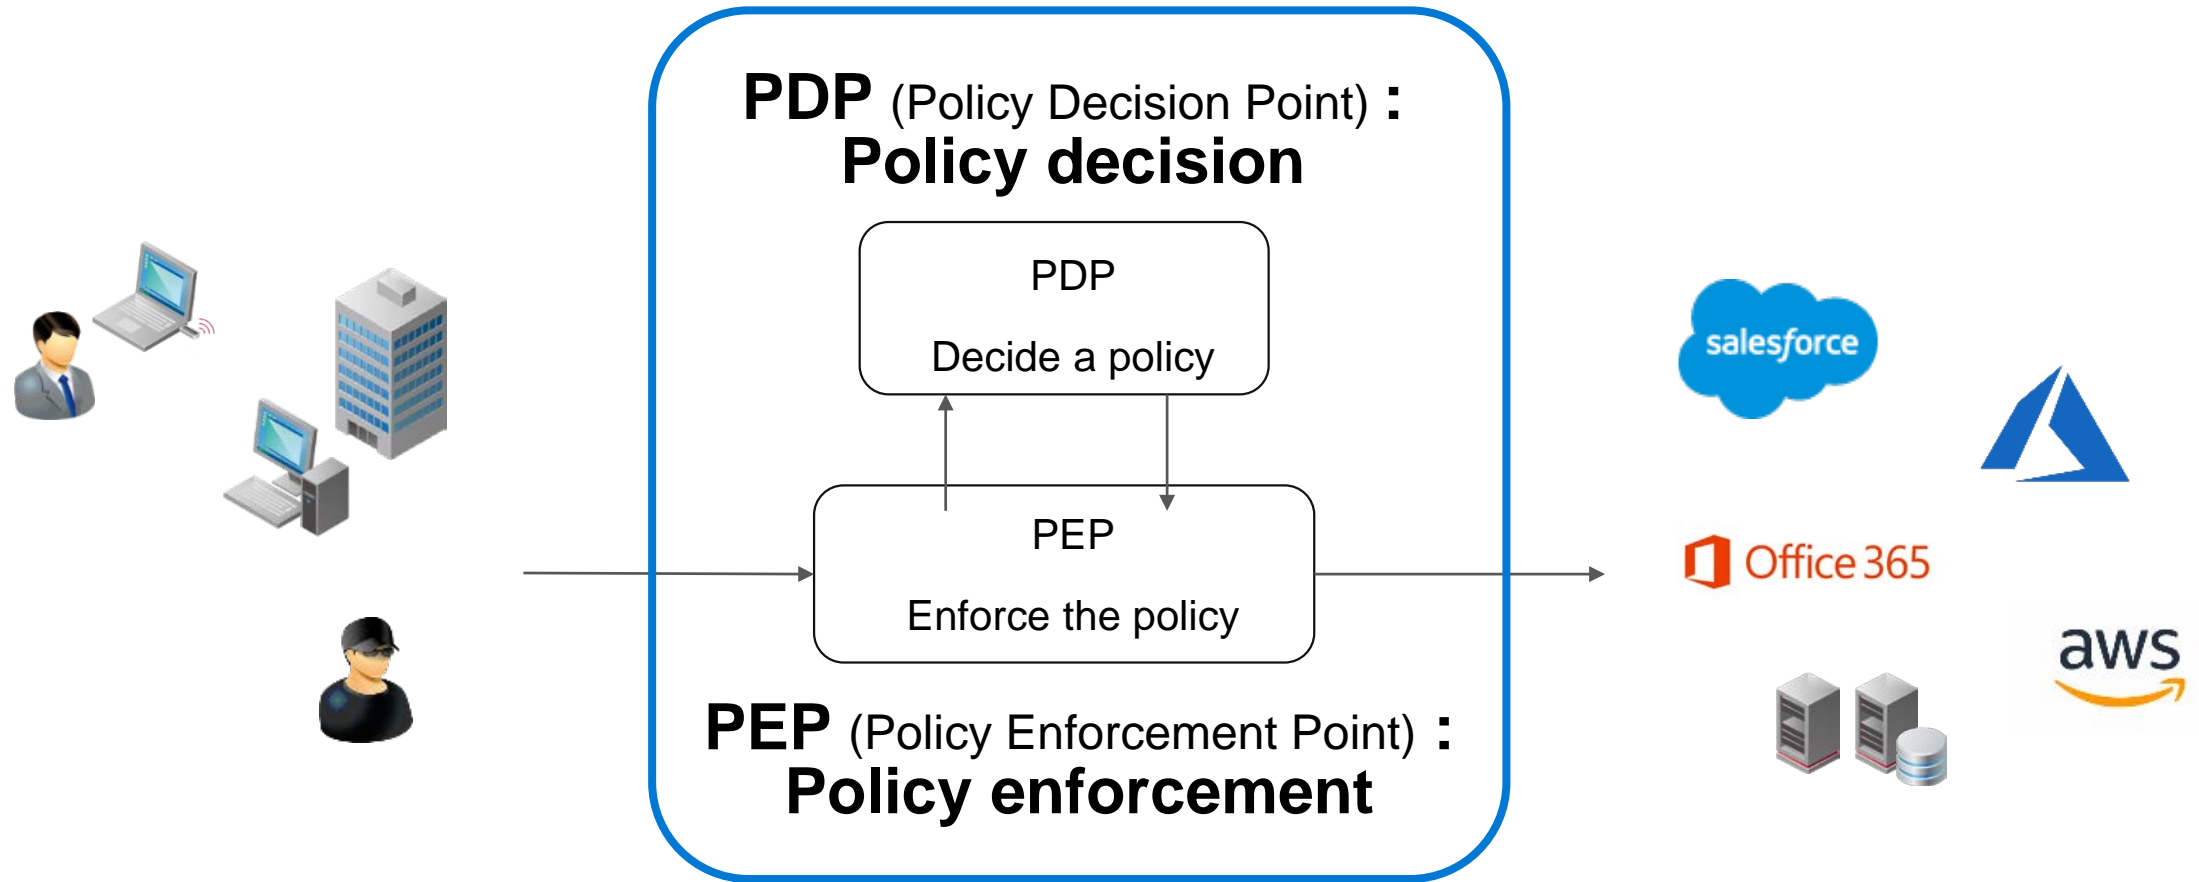

Concentrate policy decision and enforcement in one place

Basic requirements for Zero Trust

Point) "All" are target for the access destination resource

Point) Do not trust any network location

Point) Check authorization before every session

Point) Dynamically judge authorization in the client's context

How to determine authorization policies

Basic requirements for Zero Trust

Point) Keep the devices safe

Point) Reflect the status of communications in the policies while always collecting the information

How to operate the authorization policies

➔ Revise/improve the policies based on the collected information

SASE (Secure Access Service Edge)

Concept proposed by Gartner

Zero Trust based criteria to realize

Define ZTNA (Zero Trust Network Access) to realize PDP/PEP

IIJ

Internet Initiative Japan

The internet started in Japan in 1992, along with IIJ. Since that time, the IIJ Group has been building the infrastructure for a networked society, and with our technical expertise, we have continued to support its development. We have also continued to evolve our vision for the future and innovate to make it a reality. As an internet pioneer, IIJ has blazed the trail so that others could realize the full potential of a networked society, and that will never change. The middle "I" in "IIJ" stands for "initiative," and IIJ alway starts with the future.
